

BURKINA FASO

CLIMATE-SMART AGRICULTURE INVESTMENT PLAN (CSAIP)

CLIMATE CHANGE IMPACTS ON FOOD PRODUCTION

Climatic projections for Burkina Faso show increasing temperatures and decreasing rainfall. Future projections show a probable increase in temperature of **1.4-1.6°C** by the year **2050**

The number of both **DRY AND WET YEARS** is expected to increase and semi-arid areas will **BECOME MORE ARID**

Although projections for rainfall patterns are more uncertain **INTENSITY OF RAIN EVENTS MAY INCREASE,** with **LESS RAINFALL OVERALL**

Most cereals, especially **maize**, to experience losses of 9–12 percent in 2030 and 18–22 percent in 2050. **Millet and sorghum** however show relatively smaller declines in the short term, but both show losses of around 2–5 percent by 2050. **Cotton**, one of Burkina Faso's most important exports, shows declines of about 4–7 percent in all scenarios. **Temperate fruits** could decline around 5 percent in 2030 and 10 percent by 2050; **vegetables**, decline around 5 percent in 2030 and 8 percent by 2050; and **sugarcane** declines 4–5 percent in 2030 and 9–12 percent by 2050.

Sweet potato, yams, cowpeas and potatoes are relatively resilient to climate change.

KEY MESSAGES

- Prioritized CSA investments include five national activities and four regionally distributed activities focused on specific commodity value chains. Investments total of US\$472.5 million and could benefit 1,695 000 families.
- If implemented, CSA investments can increase productivity of farming families by up to 56%, significantly reduce agriculture's contributions to GHG emissions as part of the country's NDC targets.
- Key barriers to address for successful implementation include; Land tenure regimes, weak finance services, weak extension services, market distortions, and a lack of inter-institutional coordination.
- Partnerships across many stakeholders and the exploration of foundational digital solutions are likely to have a strong ripple effect on the implementation of CSA across agricultural value chains.

Burkina Faso is dependent on imports to meet its internal cereal demand, especially for maize and sorghum. This dependence is aggravated by climate change

CUMULATIVE BENEFITS OF CSA PRIORITY INVESTMENTS

CSA priority investments that were identified increase productivity by

18-56%

looking at the change in yield per beneficiaries with and without the project

If implemented, the **CSA investments** would reach **1,695 000** beneficiaries households

at a total cost of investments of **US\$472.5 MILLION.**

CHANGE IN PRODUCTIVITY % (SD)

EMISSIONS

SUMMARY OF INVESTMENT PACKAGES

Pck 1. Sustainable on-farm biogas production.

Increase access to and knowledge of sustainable domestic energy sources to conserve wood resources.

Investment volume in USD

US\$54.99 million.

Beneficiaries households 65,000

National

Pck 2. Sustainable intensification of livestock production.

Foster climate resilience in livestock systems for improved nutritional security and economic outcomes

Investment volume in USD

US\$37.5 million

Beneficiaries households 150,000

National

Pck 3. : Financial and insurance services to foster climate-smart agriculture.

Promote smallholder ability to invest in CSA innovations through good access to robust financial services

Investment volume in USD

US\$40 million

Beneficiaries households 200,000

National

Pck 4. Forest, agroforest, and garden production for climate-smart diversification

Foster climate-resilient livelihoods and food sources for women and youth smallholders through home gardens, agroforestry, and NTFP harvesting and value-addition.

Investment volume in USD

US\$55.08 million

Beneficiaries households 180,000

National

Pck 5. Building capacity in climate-smart agriculture

Promote smallholder ability to invest in CSA innovations through good access to robust financial services

Investment volume in USD

US\$55 million

Beneficiaries households 500,000

National

Pck 6. Sustainable management of water resources and irrigation

Promote smallholder ability to invest in CSA innovations through good access to robust financial services

Investment volume in USD

US\$65 million

Beneficiaries households 100,000

North Sudan

Pck 7. Developing climate-smart organic value chains

Develop a burgeoning niche market to create viable careers and shorten supply chains in peri-urban areas.

Investment volume in USD

US\$49.98 million

Beneficiaries households 60,000

North Sudan and South Sudan

Pck 8. Developing resilient oil-protein value chains

Strengthen the quality, yield efficiency, and value chains of oil-protein crops to sustainably meet domestic demands and support international market development

Investment volume in USD

US\$54.72 million

Beneficiaries households 240,000

North Sahel, North Sudan, South Sudan

Pck 9. integrated soil management for agricultural productivity and environmental restoration

Provide producers and extension agents with location-tailored information about soils and best management practices and the enabling environment to implement.

Investment volume in USD

US\$60 million.

Beneficiaries households 200,000

North Sahel, North Sudan, South Sudan
